

High Value Union Cleanup

Duplicate and brief MARC records can be a significant problem for any union catalog, making it harder to manage your collection.

We get it. And we can help.

One of our most popular services, the High Value Union Cleanup helps rid your database of duplicate records while enhancing many of your remaining records, at a price that is unmatched.

Here's what we can do for you.

First, we run a brief-to-full MARC record enhancement across your database, updating your brief records when a full matching record is found with important fields such as:

- Subject Headings
- Publication Information
- Table of Contents
- Summary Notes
- Series information

Next, we update your records with desired additional information, including Reading Program information and award notes. Decide what you want from our options.

Finally, we run our de-duplication process on the full catalog, leaving you with a clean, efficient database. When duplicate records are present, the **High Value Union Cleanup** retains the best record and attaches the copies from matching records.

We include a one-year subscription to BestMARC™ to help keep your database clean.

Call or email us today to schedule a FREE Database Diagnostic.

Discover more.™

Better discovery through the best metadata management.
